

ATLANTIC BROADBAND LAUNCHES HOSTED VOICE FOR BUSINESSES IN NEW HAMPSHIRE AND MAINE

Solution offers more than 40 of the most sophisticated enterprise-class communication features for greater flexibility and scalability

ROCHESTER, N.H., March 13, 2019 — <u>Atlantic Broadband</u>, the nation's ninth largest cable operator, today announced the availability of Hosted Voice for businesses across its New Hampshire and Maine service areas. This announcement introduces more than 40 enterprise-class phone features to regional businesses for a flexible and scalable communications solution.

Hosted Voice communications and features are delivered over a dedicated connection with network redundancy for optimal performance, security and reliability. It lives in a data center, rather than on-site, for ease of operation and streamlined maintenance with little to no capital cost. The end result is a communications service with unprecedented levels of flexibility and capability to support businesses with five to 500 employees.

Atlantic Broadband's Hosted Voice Service is ideal for multi-location businesses or those that utilize remote, mobile or afterhours employees. Its benefits include:

- **Feature-rich Service** More than 40 of the most sophisticated, enterprise-class features like auto-attendant, hold music, web conferencing, voicemail, and multiple extensions
- **Turn-key Solution** Atlantic Broadband's technicians and engineers will work hand-inhand with businesses to ensure a seamless transition from their current system
- **Multi-site and Mobile** In today's workplace, many employees work remotely or onthe-go. The solution offers seamless integration between multiple offices and mobile devices, so employees can communicate with colleagues and customers from anywhere
- Flexible and Cost-effective With no need to purchase additional equipment and predictable monthly costs, customers can easily switch to Hosted Voice. It is also a solution that can scale as businesses grow and needs change
- **Reliable and Secure** Atlantic Broadband owns, operates and proactively monitors its networks around the clock to ensure they operate securely and reliably. This offers a greater level of technical support and maintenance than many regional businesses are able to manage internally

"Many companies today face challenges related to their communications systems, including the ability to scale and offer customers an expert level of service at a reasonable price-point," said Ed Merrill, General Manager, New Hampshire and Maine. "Atlantic Broadband's Hosted Voice wholly-managed service reduces these barriers with smart software and cloud technology to help drive increased efficiencies, enhanced revenue growth and improved customer service for businesses, no matter the industry."
