Atlantic Broadband and Miami Data Vault Partner to Deliver Unparalleled Business Services to Global and Local Customers

MIAMI—February 9, 2015 — Atlantic Broadband, an innovative provider of Internet, Phone and TV services to both businesses and residents in the greater Miami area, with additional operations in Western Pennsylvania, Maryland/Delaware, and Aiken, S.C., today announced a partnership with Miami Data Vault (MDV), Miami's first and most secure data center and colocation facility. The partnership enables Miami Data Vault customers to take advantage of Atlantic Broadband's suite of Business Service offerings, and further solidifies Atlantic Broadband as a premier provider of communication solutions in the rapidly growing South Florida sector.

The news comes as Atlantic Broadband continues to make significant investments to enhance its network and service portfolio to exceed the requirements of today's sophisticated enterprises. For example, the company recently launched an enhanced Metro Ethernet service that scales up to 10 Gigabits per second. In addition, earlier this year, Atlantic Broadband brought a unique PRI and SIP trunking offering, called Flex Trunk to its customers companywide. The partnership also opens Atlantic Broadband's all-fiber access network to Miami Data Vault customers.

As part of the partnership, Miami Data Vault will add Atlantic Broadband to its carrier-neutral offering. Miami Data Vault is a locally owned and operated data service facility that serves as a connectivity hub for numerous clients across all business sectors. Its state-of-the-art Category 5 rated structure built outside of the 500 year flood plain, offers clients the best possible storm and flood protection, and is backed up by redundant emergency generators and UPS systems that are designed to withstand natural, technological and human disasters.

"We couldn't be more excited to be partnering with Miami Data Vault to deliver area businesses with solutions that meet their growing needs," said David Keefe, Atlantic Broadband's Senior Vice President and General Manager, Florida. "With our focus on being a true business partner to our customers, we look forward to delivering Miami Data Vault's customers with unmatched responsiveness and value."

"The need for reliable infrastructure becomes even more critical as more organizations rely on network connectivity to support and protect daily operations of a business," said Miami Data Vault Sales Director Scott Haugland. "We are pleased to welcome Atlantic Broadband into our facility. The company's service offering is an excellent addition and we look forward to providing an environment that facilitates their continued expansion."

About Atlantic Broadband
Atlantic Broadband, a wholly-owned subsidiary of Cogeco Cable Inc. (TSX: CCA), is the 13th largest cable operator in the United States, based on number of Basic Cable customers served. The company provides TV, Internet and Phone services to more than 230,000 residential and business customers located in four operating regions: Western Pennsylvania, Miami Beach, Maryland/Delaware, and Aiken, S.C. Atlantic Broadband is headquartered in Quincy,

Massachusetts. Additional information is available at www.atlanticbb.com.

About Miami Data Vault
Miami Data Vault is a state-of-the-art 100,000 square foot data center that houses and protects companies' critical equipment and information, especially during emergencies, severe weather, and other external or uncontrollable circumstances. With MDV's fully redundant infrastructure, connectivity, and security systems, customers truly can concentrate on core operations. MDV focuses on the protection of mission critical servers, data storage devices, and communications equipment, with comprehensive services that include secure colocation space in a carrier-neutral environment, from cabinets to cages, with multiple connectivity options for all applications. Private disaster recovery suites also are available for reservation. As a locally owned and operated facility, MDV meets customer needs with highly-personalized service.
